

QC Internship Task Goal

Test System

You will use a simple ready API + UI mock system:

- Mock API (provided via Postman collection OR JSON server)
- Simple UI (any free demo dashboard or your own simple React page)

What to Do

1. Manual Testing

- Test all available features in UI + API
- Identify issues in:
 - validation
 - UI behavior
 - error handling
- Provide us with google sheet has all test cases (10-20 max)

2. API Testing (Postman)

Using Postman:

- Test all endpoints for any ready public APIs
- Check:
 - status codes
 - response correctness
 - error cases

3. Automation (Basic)

- Automate **2 critical test cases only**
- Use any tool (Cypress / Playwright / Selenium/....)

4. Load Testing (Simple)

Using any tool (JMeter):

- Test 1 API endpoint
- Show basic results (response time + errors)

Bug Reporting

Report **at least 3 bugs (real or intentionally found)** using:

- Title
- Steps to reproduce
- Expected result
- Actual result
- Severity

Shall be inside the google sheet in new tap

Deliverables

1. Postman collection(on github repo)
2. Automation code (GitHub repo)
3. Simple test report (google sheet public shared)
4. Short video (clear voice):
 - explain tests done
 - show Postman
 - show automation
 - show load test result
